

Sahil Undale

Mumbai, India - 400006 — sahil22undale@gmail.com — 7559292204
linkedin.com/in/sahil-undale — github.com/sudosahil

PROFESSIONAL SUMMARY

A technologist and community builder with hands-on experience evaluating AI models, developing full-stack applications, and organizing large-scale institutional events. Passionate about prompt engineering, AI capabilities, and empowering student developer communities with cutting-edge tools.

EXPERIENCE

Independent Freelance Web Development

Mumbai & Pune, India

Freelance Web Developer

2025–Present

- Delivered end-to-end web applications for 5+ businesses and startups, handling everything from UI/UX design and database architecture to final deployment.
- Engineered full-stack operational tools, including a custom Razorpay-integrated booking platform for Bombay Gaming Co. and a comprehensive admin dashboard with role-based access for Siddhi Coaching Classes.
- Built conversion-optimized marketing engines for clients like TheoremLabs, routing leads directly to WhatsApp and significantly improving local search visibility.
- Developed high-performance architectures using Next.js, TypeScript, Node.js, and PostgreSQL, consistently hitting 95+ Lighthouse scores for client sites.
- Ensured application reliability and zero-downtime deployments by implementing robust automated testing pipelines using Jest, Testing Library, and MSW.
- Maintain a personal portfolio (sahilundale.in) showcasing shipped client projects.

Next Gen Community (NGC)

Mumbai, India

Research Analyst Intern

January 2025–April 2025

- Researched and evaluated AI models across multiple use cases through hands-on testing and experimentation.
- Designed and refined effective prompts for different models to assess performance, limitations, and optimal applications.
- Authored structured research reports translating complex AI model behavior into clear, readable documentation and best-fit real-world use cases based on empirical testing.

Atraya Technologies

Remote, India

Software Developer

May 2025–Present

- Developing an end-to-end e-Governance and project management application serving as a centralized platform for interaction between government departments, citizens, and contractors.
- Engineering workflow-based modules for project tracking, comprehensive bill management, RA bill clearance, and LOC approvals.
- Contributing to a fully integrated HRMS module featuring automated leave calculation, biometric attendance tracking, and statutory compliance management.
- Building customized, role-based dashboards for staff and contractors to enable transparent tracking of project expenditures and fund releases.
- Developing scalable cloud-based application architectures utilizing Microsoft MVC 6 framework and Angular with WebAPI integrations.

BloomBox - Entrepreneurship Cell of KJSCE

Mumbai, India

Events and Operations Member

June 2025–Present

- Managed on-ground logistics and execution for large-scale entrepreneurship events, successfully coordinating crowd flow and operations for 500 to 800 attendees.
- Structured and executed multi-stage event workflows, including directing a dedicated qualifier round leading up to a large-scale main event.
- Coordinated corporate speaker invitations and streamlined logistics for major initiatives, including the E-Summit, securing participation from industry founders and professionals.
- Managed automated outreach and formal communications to build a strong network of guest speakers while collaborating with cross-functional student teams to hit operational deadlines.

RevBoosters

Pune, India

Performance Marketing Intern

May 2025–July 2025

- Managed backend operations of Shopify websites for multiple brand clients, ensuring accurate data and smooth platform functionality.
- Analyzed sales patterns and customer trends to generate insights for discount strategies and business optimization.

PROJECTS & HACKATHONS

NAKSH - Safety-Aware Pedestrian Routing App — <i>Smart India Hackathon (SIH) Final Round</i>	2026
- Engineered a safety-aware pedestrian routing Android app using Flutter and Python/FastAPI that computes the safest walking routes rather than just the fastest options[cite: 3]. - Implemented a modified safety-weighted Dijkstra algorithm using PostgreSQL, PostGIS, and pgRouting to successfully process 455,251 OpenStreetMap segments[cite: 3]. - Designed a 5-parameter safety scoring engine calculating live risks based on lighting, footpaths, activity, assistance, and connectivity, achieving a p50 route calculation latency of 18.2 ms[cite: 3]. - Built a privacy-preserving crowdsourced evidence reporting loop utilizing Redis and Celery for async processing while enforcing k-anonymity parameters[cite: 3].	

EDUCATION

KJ Somaiya College of Engineering <i>B.Tech in Electronics and Computer Engineering</i>	Mumbai, India July 2024–August 2028
St. Arnolds Central School — <i>Class XII (PCM, CS)</i>	Pune, India — April 2024
Vibgyor High, Balewadi — <i>Class X (PCM, CS)</i>	Pune, India — April 2021

SKILLS

Languages & Frameworks: TypeScript, Python, Flutter, Next.js, React, Node.js, Tailwind CSS, Angular Backend & Databases: PostgreSQL, PostGIS, pgRouting, Redis, Celery, Prisma ORM, Supabase Tools & AI: Prompt Engineering, AI Model Evaluation, Docker, Git, Razorpay, Shopify Core Competencies: Data Analysis, Technical Writing, System Architecture, Event Coordination
